

Synopsis: CSE326

Title: Car Rental System

AIM: The aim of the project is to design a Car Rental System from where people can book cars of their own choice.

Introduction and Theory Behind Project: The idea arises from the difficulties faced by travelers. As when people go to some other place to visit, they face very difficult situation in booking cabs and autos as they are difficult to find and are very costly. Even sometimes we ourselves noticed this while traveling, we always thought if we had our own vehicle, we could have traveled everywhere without any problem.

The project will mostly target tourists, as these are the ones who face most difficulties. They book cars from local shops for their travels and find very difficulties in finding them and it also takes a lot of time. So, we decide to make a platform for them where they can find and rent cars easily without any problem. So, what we will do is we will make a central platform for all the rental service providers in a city.

REQUIREMENTS:

- 1.Login and Sign Up page for the Platform.
- 2.Main Work Page (Starting Point, Car type, Price)
- 3.User Details Page (Aadhar Card, Driver's License No etc.)
- 4.Payment Page.

WORK LOAD DISTRUIBUTION:

- 1.Tabrej (11906450): Login Portal
- 2.Ajay (11906441): Main Work Page
3. Naga Anvesh (11904818): User Details Page
- 4.Shrey (11905104): Payment Page.

GRANTT CHART:

1. 3 Days -- Login Page:
2. 4 Days -- Main Work Page
3. 4 Days -- User Details Page
4. 3 Days – Payment Page

Total Days Required – 15 Days.
